## DETAILED ACTION

### *Election/Restrictions*

1. This application contains claims directed to the following patentably distinct species of the claimed invention:

Group 1, claims 1-8 are drawn to a circuit for reading a memory cell which includes a read node, a first current source providing first bias current to said node, a first transistor coupled to read node, a reference node, a reference generator providing reference current to reference node, a second current source providing second bias current to reference node, and second transistor with control terminal coupled to read node and first conduction terminal coupled to reference node;

Group 2, claims 9-13 are drawn to a method for reading a memory cell comprising steps of “sourcing a first bias current to read node”, “sinking read current from read node”, “sinking from read node a first difference current that is inversely proportional to read current”, “sourcing a second bias current to reference node”, “sinking reference current from read node”, and “sinking from reference node a second difference current that is inversely proportional to read current”;

Group 3, claims 14-28 are drawn to a sensing circuitry for reading and verifying the contents of memory cells, which includes a sense amplifier having first sensing portion... provided with an output terminal for connection to a first input terminal of a comparator, a second reference circuit portion connected to a reference current generator..., characterized in that said first and second circuit portions comprising a series of first and second transistors,

Art Unit: 2818

respectively, being connected between a first reference voltage and a second voltage reference and having respective points of interconnect taken to said output terminals of said first and second circuit portions.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, no claim is generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

2. Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Art Unit: 2818

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
